

svm+hsj — candidate spread metrics on the SAME adversarial clouds (train-only)
 coverage gap (spatial) vs imbalance (random), 95% CIs · raw OPTICS spread = m0 reference

m4 kNN-graph local spread (mean dist to k nearest neighbours) · spread (OPTICS spread in top-3 PCs) · local density ratio (null after jitter) · NN-distance ratio (relative isolation — null after jitter) · raw OPTICS spread (reference — fragile on wine)
